A direct ionization mass spectrometry ion source is a device used in a mass spectrometer to directly ionize molecules in a sample into charged ions. Unlike traditional ionization sources, it does not require complex sample pretreatment or dissolution processes and can act directly on solid, liquid or gas samples. This ion source ionizes sample molecules through physical or chemical means (such as electric fields, lasers or plasma) to produce ions that can be detected by a mass spectrometer. It is widely used for rapid and accurate chemical analysis and component identification, and is suitable for a variety of application scenarios such as environmental analysis, food testing and drug development.
