## Abstracts

Direct Screwing Fastener is a widely used fastener with self-tapping properties and strong fastening force. It refers to a screw that can pass through the object to be connected by itself, and can press itself into the object to be connected at the same time of drilling, so as to achieve the purpose of fastening. This fastener can drill into wood, metal and other materials, so that wood, metal, etc., can be fixed firmly. Due to its strong self-tapping performance and fastening force, self-tapping fasteners are often used in furniture, wood products, construction and mechanical and electrical equipment and other fields.

According to our (Global Info Research) latest study, the global Direct Screwing Fastener market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
