## Abstracts

Direct thermal linerless blank label rolls are specialized label rolls designed for use in direct thermal printing applications where traditional label liners are not required. Unlike traditional label rolls that feature a backing material (liner) to support the labels and facilitate printing and handling, linerless label rolls consist of adhesive-coated labels that are stacked directly on top of each other without any liner material in between. This innovative design eliminates the need for liner waste, making linerless labels more environmentally friendly and cost-effective. Direct thermal printing technology utilizes heat-sensitive paper to create images, text, and barcodes directly on the label surface without the need for ink or toner. Linerless label rolls are commonly used in various industries such as retail, logistics, food service, and healthcare for applications such as product labeling, price marking, shipping labels, and more. They offer advantages such as increased label capacity per roll, reduced downtime for roll changes, and improved operational efficiency. Additionally, linerless labels are often coated with a special heat-activated adhesive that ensures reliable adhesion to a wide range of surfaces while also providing resistance to moisture, chemicals, and fading, making them suitable for demanding environments.
