Abstracts

Direct to Metal (DTM) paint is a type of coating designed to be applied directly onto metal surfaces without the need for priming or sanding, except in cases where the metal is extremely rough or contaminated. DTM paints are formulated to bind effectively with a variety of metal substrates, providing durable protection and enhancing the appearance of the metal. They are commonly for automotive, architectural, and industrial applications where a quick and efficient painting process is desired. DTM paints can offer both functional and decorative finishes, and they are available in a range of sheens, from matte to high gloss.

According to our (Global Info Research) latest study, the global Direct to Metal Paint market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.

The industry trend for Direct to Metal paint is focused on developing products that offer higher performance, better durability, and increased environmental friendliness. Manufacturers are working on formulations that provide excellent adhesion, corrosion resistance, and UV stability, allowing DTM paints to maintain their integrity and aesthetics even in challenging conditions. There is also a push towards using solvent-free or low-VOC (volatile organic compounds) paints to reduce environmental impact and improve worker safety. Additionally, the trend includes the integration of smart coatings that can change properties depending on their environment, such as self-healing or self-cleaning abilities. As technology advances, we can expect DTM paints to become even more efficient and sustainable, catering to a broader range of industrial and architectural needs.
