A detachable swimming pool is a temporary or semi-permanent facility that can be quickly assembled and disassembled and can be reused. It uses all standard components prefabricated in the factory and assembled on site to complete the assembly and construction of swimming pool facilities of various specifications. It has the characteristics of relatively small investment, simple site requirements, convenient installation, and complete functions. Swimming pools of various specifications can be formulated according to the actual needs of the user's site, and can be quickly installed on most simple flat sites that meet the requirements. It has significant site adaptability and repeated installation and disassembly characteristics, and is suitable for seasonal use or situations with high requirements for site flexibility. This type of swimming pool system overcomes the strict restrictions of ordinary swimming venues in terms of professional approval, construction cycle, investment scale, land demand, etc. It has the advantages of economic cost, fast construction, and reasonable use of general flat sites. It is usually composed of a pool body (pool bank, water escalator, safety guardrail, etc.) and a full set of water treatment and disinfection systems, and can be equipped with ancillary rooms such as changing rooms and showers as needed.
