## Abstracts

According to our (Global Info Research) latest study, the global Disc Tube Reverse Osmosis(DTRO) Membrane market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Disc Tube Reverse Osmosis (DTRO) Membrane is a membrane component specially used to treat high-concentration sewage. It consists of a three-layer structure of a support layer, a dense layer and a contact layer. The support layer provides the mechanical stability of the membrane, the dense layer controls the water permeability of the membrane, and the contact layer provides the anti-pollution performance of the membrane. The working principle of DTRO membrane is to separate water and solutes through forward osmosis, concentration and re-osmosis. It has the characteristics of high pressure resistance, high SDI resistance, high COD resistance, wide flow channel design, easy cleaning and maintenance, etc. It is widely used in the fields of landfill leachate treatment, electroplating wastewater treatment, chemical wastewater treatment, coal and mining wastewater treatment, etc., and performs well in treating high-concentration and high-difficulty wastewater.
