Abstracts

The discontinuous screen changers utilize a lever, ratchet, or screw device to move the melt filters in and out of the flow. These screen changers are called discontinuous because they require the line to be stopped for a screen change. The positive characteristics are low cost and straight-through, low-pressure-loss flow design; while the obvious disadvantage is complete process interruption when screens need to be changed.

Scope of the Report:

This report focuses on the Discontinuous Screen Changers in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The key players are Nordson, Maag, JC Times, Parkinson Technologies, PSI, Anji Plastic, Erema, Batte Mechanical, Trendelkamp, Alpha Marathon, ECON, Plasmac, CROWN and so on.

Based on regions, the global Discontinuous Screen Changers market is segmented into North America, Europe, China, Asia (Excluding China), and the Rest of the World (ROW). The Asia Pacific region is estimated to be the key market over the forecast period, owing to the increasing demand for discontinuous screen changers in countries such as China, India, and Japan. The availability of low-cost discontinuous screen changers from regional manufacturers is impacting the growth of the market positively. Additionally, the availability of affordable discontinuous screen changers manufactured by leading players in order to remain competitive has also bolstered the market growth in this region. The growing competition among the third-party e-commerce

channels (backed with large pockets venture capitals) is another key factor fueling the industry growth.

All manufactures in the world are committed to the improvement of product. These two years, some of Chinese manufactures can almost catch up with the world's leading technology too. Most technologies are developed by the manufacturers instead of importing from other companies.

Significant and lasting barriers make entry into this market difficult. These barriers include, but are not limited to: (i) product development costs; (ii) capital requirements; (iii) intellectual property rights; (iv) regulatory requirement; and (v) Transitions' unfair methods of competition.

Although discontinuous screen changer brings a lot of opportunities, the study group recommends the new entrants just having money but without technical advantage and upstream and downstream support do not enter into this field due to the low growth rate.

The worldwide market for Discontinuous Screen Changers is expected to grow at a CAGR of roughly 1.0% over the next five years, will reach 57 million US\$ in 2023, from 54 million US\$ in 2017, according to a new GIR (Global Info Research) study.
