## Abstracts

The global Discontinuous Screen Changers market size is expected to reach \$ 80.32 million by 2032, rising at a market growth of 3.2% CAGR during the forecast period (2026-2032).

The discontinuous screen changers utilize a lever, ratchet, or screw device to move the melt filters in and out of the flow. These screen changers are called discontinuous because they require the line to be stopped for a screen change. The positive characteristics are low cost and straight-through, low-pressure-loss flow design; while the obvious disadvantage is complete process interruption when screens need to be changed.

Global Discontinuous Screen Changers key players include Nordson, Maag, JC Times, Parkinson Technologies, PSI, etc. Global top five manufacturers hold a share about 70%. North America is the largest market, with a share about 30%, followed by China and Europe, both have a share about 20 percent. In terms of product, both Manual Discontinuous Screen Changers and Hydraulic Discontinuous Screen Changers have a share about 50%. And in terms of application, the largest application is Plastic, followed by Resin, and Ruber.

This report studies the global Discontinuous Screen Changers production, demand, key manufacturers, and key regions.
