According to our (Global Info Research) latest study, the global Discovery & Targeted Proteomics Service market size was valued at US\$ 2836 million in 2025 and is forecast to a readjusted size of US\$ 5970 million by 2032 with a CAGR of 11.3% during review period.

Discovery proteomics involves unbiased, large-scale analysis of proteins in complex biological samples, while targeted proteomics focuses on known proteins or specific pathways. The two complement each other. Non-targeted proteomics provides extensive protein information and the discovery of potential biomarkers, laying the foundation for subsequent in-depth research in targeted proteomics, while targeted proteomics can verify and functionally evaluate key proteins identified in non-targeted analysis, thereby achieving a more detailed understanding of biology.
