According to our (Global Info Research) latest study, the global Discrete Manufacturing Software market size was valued at USD 767.6 million in 2023 and is forecast to a readjusted size of USD 1250.1 million by 2030 with a CAGR of 7.2% during review period.

Discrete manufacturing software is a type of software that supports the production of distinct or separate products, such as automobiles, electronics, furniture, or machinery. Discrete manufacturing software typically includes features for enterprise resource planning (ERP), manufacturing execution system (MES), product lifecycle management (PLM), supply chain management (SCM), quality management system (QMS), and business intelligence (BI). Discrete manufacturing software helps manufacturers to optimize their operations, reduce costs, improve quality, increase flexibility, and enhance customer satisfaction.

The industry trend of discrete manufacturing software is driven by the increasing adoption of Industry 4.0 technologies and practices that enable the digital transformation of manufacturing processes. Industry 4.0 refers to the integration of cyber-physical systems, cloud computing, Internet of Things (IoT), artificial intelligence (AI), machine learning (ML), big data analytics, and blockchain in manufacturing operations. These technologies help discrete manufacturers to improve their productivity, flexibility, reliability, and cost competitiveness by enabling smart factories that can monitor, control, optimize, and automate their production processes in real-time⁶⁷⁸. Some of the key benefits of Industry 4.0 for discrete manufacturing are:

Enhanced visibility and transparency across the entire value chain

Improved quality and consistency through closed-loop feedback and self-correction mechanisms

Increased efficiency and agility through data-driven decision making and dynamic scheduling

Reduced waste and downtime through predictive maintenance and preventive actions

Higher customer satisfaction and loyalty through mass customization and personalization

Greater innovation and differentiation through digital twins and simulation

Better collaboration and communication among stakeholders through digital platforms and networks
