A discrete semiconductor is one that has a single semiconductor device like a diode or transistor. It is the opposite of an integrated circuit semiconductor which has many devices on a single piece of semiconductor. The following are various discrete transistors.

Scope of the Report:

This report focuses on the Discrete Semiconductors in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Progress in the IoT space depends on the sensor market and wearables to a great extent. Companies, such as Samsung, Nike, Xiaomi, Apple, and many more are flooding the market with wearables such as health bands, fitness trackers, and smartwatches that track all the vital statistics of the user. Discrete semiconductors will fulfil the key need for high power and energy efficient devices demanded by these industries in the future.

Automotive segment is the fastest growing segment of the overall discrete semiconductors market. To reduce the dependence on fossil fuels and to reduce environmental hazards, the automotive sector is shifting to hybrid vehicles. Also, these vehicles have more semiconductor content compared to traditional automobiles. This change has raised the demand and requirement for power efficiency fulfilled by the discrete power semiconductors.

The market is expected to witness a significant push for investments in R&D by the leading market manufacturers during the forecast period. The main area of vendor focus in the market is toward energy conservation. Many manufacturers are engrossed in

increasing power density, and it is expected to positively impact the implementation of discrete power in newer application areas.

The worldwide market for Discrete Semiconductors is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
