According to our (Global Info Research) latest study, the global Discrete Thyristors market size was valued at USD 731.6 million in 2023 and is forecast to a readjusted size of USD 1212.4 million by 2030 with a CAGR of 7.5% during review period.

Discrete Thyristors are semiconductor devices used for controlling and switching electric power. They belong to the family of semiconductor devices known as 'power semiconductors' which are capable of handling high voltages and currents.

Thyristor can be classified into SCR and TRIAC according to the direction of current control. SCRs are unidirectional devices and conduct load current in only one direction. SCRs are triggered by a positive trigger current into the gate. Low power applications include circuit breakers like GFCI and engine ignition circuits. High power applications include motor control, inrush current protection, battery chargers, SMPS and UPS. TRIACs are current-controlled, bidirectional power latches, designed to control AC-mains loads. TRIACs are mainly used in home appliances, electrical (water) heaters, lamp dimmers and motor control applications.

The world's largest application of thyristor is in the computing & communications, accounted for 39% in 2022, followed by consumer electronics with 21% in 2022.
