According to our (Global Info Research) latest study, the global Disilicon Hexahydride market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Disilicon hexahydride is a toxic compound with the molecular formula Si_2H_6 that is gaseous at room temperature. Its properties are very similar to those of ethane, and both are colorless and flammable gases, but its silicon-silicon bond is weaker than the carbon-carbon bond of ethane, so it is less stable than ethane. Disilanes are generally a good source of hydrogen, which can be obtained by simple chemical reactions. In addition, it can also be used to prepare pure silicon by thin film deposition, which is one of the important special electronic grade gases in the semiconductor industry.
