According to our (Global Info Research) latest study, the global Disitamab Vedotin market size was valued at US\$ 329 million in 2025 and is forecast to a readjusted size of US\$ 1181 million by 2032 with a CAGR of 16.9% during review period.

Disitamab Vedotin is an antibody–drug conjugate (ADC) targeting human epidermal growth factor receptor 2 (HER2). It consists of a humanized anti-HER2 monoclonal antibody, a cleavable linker, and a cytotoxic microtubule inhibitor payload. The antibody component specifically recognizes HER2-expressing tumor cells and delivers the cytotoxic agent into the cells, where the active component is released to inhibit microtubule polymerization and induce tumor cell apoptosis. This drug is mainly used for the treatment of various HER2-expressing solid tumors, such as gastric cancer and urothelial carcinoma. It is characterized by strong targeting specificity, significant efficacy, and manageable toxicity, making it an important innovative therapy in the field of HER2-targeted treatments. In 2025, global production of disitamab vedotin (RC48, trade name: Aidixi®) reached approximately 320,000 units.

Disitamab Vedotin, as a HER2-targeting antibody–drug conjugate (ADC), is currently in a rapid growth phase within the precision oncology market. With the expanding patient population of HER2-expressing tumors such as gastric cancer and urothelial carcinoma, along with increasing HER2 testing rates, the target population for this drug continues to grow, driving sustained market demand. Meanwhile, the maturation of ADC technology platforms and the accumulation of clinical data have led to increasing recognition of its efficacy and safety, enhancing its market competitiveness. However, competition is also intensifying, including from global blockbuster ADC products such as Enhertu as well as other HER2-targeted therapies, which pose direct competitive pressure. Overall, the

market for Disitamab Vedotin represents a “high-value, high-growth” segment, with future expansion mainly driven by indication expansion, development in HER2-low populations, and global commercialization efforts.
