## Abstracts

The global Disk Array Controller Cards market size is expected to reach \$ 11656 million by 2032, rising at a market growth of 7.5% CAGR during the forecast period (2026-2032).

Disk array controller cards are add-in storage control hardware installed in servers or workstations to manage multiple hard disk drives or solid-state drives and implement RAID functions at the hardware level. These cards typically integrate dedicated controller chips, high-speed host interfaces, backend storage interfaces, and cache and error-checking modules, enabling them to perform data striping, mirroring, parity calculation, and array rebuilding independently of the host CPU. Disk array controller cards are widely used in enterprise servers, data center storage nodes, and professional computing environments where high performance, reliability, and data protection are critical.

The market is driven by upgrades in enterprise IT infrastructure and the growing storage demands of data centers. As cloud computing, big data, and artificial intelligence workloads continue to expand, servers increasingly require high I/O concurrency, stable performance, and robust data protection, reinforcing the role of hardware-based RAID controller cards in mission-critical environments. At the same time, improvements in capacity and performance of enterprise HDDs and SSDs are accelerating the adoption of multi-drive, high-bandwidth storage architectures, further strengthening the relevance of disk array controller cards. In addition, rising data security and compliance requirements, business continuity needs, and the trend toward allocating CPU resources to compute-intensive tasks are encouraging users to offload storage management to dedicated controller cards, supporting sustained market demand.

Broadcom is the largest manufacturers of Disk Array Controller Cards in the world, has a share over 35%. Other players include Intel, Dell, Microchip Technology, etc. In terms of product types, HBA Controller Card is the largest market segment, occupying for a share of above 44%, followed by RAID Controller Card and Expander Controller Card.
