Abstracts

The global Disodium Methanedisulfonate market size is expected to reach $ 19.96 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

In 2025, global sales volume of disodium methanedisulfonate was approximately 1,156 tons, with a mainstream ex-factory price of about USD 12 per kg. Gross margins of major manufacturers in the industry were approximately 25%?40%.

Disodium methanedisulfonate is a fine chemical product belonging to the organic sulfonate category. Its CAS number is 5799-70-2, and its molecular formula is commonly written as CH2Na2O6S2 or CH2(SO3Na)2. The product is generally supplied as a white to off-white powder or crystalline solid and is readily soluble in water. It is mainly used as a chrome-plating additive, hard chrome electroplating intermediate, and metal surface treatment auxiliary. It is neither sodium methanesulfonate nor methanedisulfonic acid itself, but the disodium salt form of methanedisulfonic acid. In electroplating systems, it is mainly valued for its water solubility, stability, and ability to improve coating performance.

The upstream supply chain mainly includes methanedisulfonic acid, sodium hydroxide or sodium carbonate as neutralization raw materials, as well as basic chemical materials and equipment required for refining, crystallization, drying, and packaging. Among these, product purity, chloride ions, sulfates, heavy metal impurities, and moisture control directly affect its application stability in chrome-plating baths. Downstream applications are concentrated in chrome-plating additives, surface treatment formulations, fine chemical intermediates, and specialty industrial formulations. In particular, in hard chrome plating and decorative chrome plating, it can

be used to improve bath throwing power, covering power, coating hardness, brightness, and process stability.
