Abstracts

The global Dispersed Chlorinated Alkanes market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Different levels of available chlorine are added to achieve maximum flame retardant efficiency. Due to their nonionic base, they can be used in anionic and cationic emulsion systems. In addition to their flame retardant contribution, they improve adhesion, impact, chemical and water resistance, and allow users to formulate water-based systems rather than solvent-based ones.
