The papermaking industry has always been an indispensable part of human production and daily life, and dispersing agents play a critical role in this industry. Dispersing agents in papermaking are chemical substances that can uniformly disperse solid particles in a liquid medium. They are primarily used to evenly disperse cellulose, fillers, and various additives in water, creating a stable pulp suspension. The main functions of dispersing agents include promoting suspension, improving flowability by reducing pulp viscosity, and enhancing stability by preventing sedimentation, thus maintaining the uniformity of the pulp.
