Abstracts

Dispersing machines are used in all areas of industry where mixing of liquids or liquids with solids is required. A disperser will generate the shear force necessary to rapidly de-lump powders in a liquid. This de-lumping process is called dispersion. A disperser is a high-powered, low volume pump. Considering its substantially higher horsepower per gallon requirement, a disperser is an inefficient mixer.

According to our (Global Info Research) latest study, the global Dispersion Machine market size was valued at US\$ 124 million in 2023 and is forecast to a readjusted size of USD 147 million by 2030 with a CAGR of 2.5% during review period.

Global Dispersion Machine key players include IKA, Netzsch, PRIMIX Corporation, Fluko, Silverson, etc. Global top five manufacturers hold a share over 30%.

China is the largest market, with a share about 25%, followed by US, and Europe, both have a share over 40 percent.

In terms of product, Frequency Control is the largest segment, with a share over 45%. And in terms of application, the largest application is laboratory, followed by Industrial.
