Abstracts

According to our (Global Info Research) latest study, the global Disposable Biodegradable Bamboo Tableware market size was valued at US\$ 8809 million in 2025 and is forecast to a readjusted size of US\$ 10829 million by 2032 with a CAGR of 3.0% during review period.

In 2025, the global production of disposable biodegradable bamboo tableware reached approximately 85.61 billion, with an average global market price of around US\$100 per thousand units. In the same year, the global total production capacity of disposable biodegradable bamboo tableware reached 107 billion units. The industry average gross profit margin of this product reached 27%.

Disposable biodegradable bamboo tableware is made primarily from bamboo through a process of crushing, fine grinding, and high-temperature, high-pressure molding. It decomposes completely into environmentally friendly substances in a short period of time under natural conditions. Made from a renewable resource, bamboo, it is biodegradable and designed to replace traditional plastic tableware and reduce white pollution.

The supply chain for disposable biodegradable bamboo tableware encompasses upstream bamboo planting and harvesting, midstream bamboo fiber processing and tableware manufacturing, and downstream sales and applications in hotels, restaurants, and homes. Currently, some companies have made significant progress in the comprehensive utilization of bamboo and the research and development of environmentally friendly tableware, driving the development of the entire supply chain from bamboo forests to finished products.

Driven by the ongoing global push to restrict plastics and rising consumer environmental awareness, disposable biodegradable bamboo tableware is emerging as a key alternative to plastic tableware. Markets across Europe, North America, Japan, and China have successively implemented restrictions on single-use plastics, encouraging foodservice businesses to adopt products made from sustainable materials such as bamboo, wood, sugarcane bagasse, and paper pulp. Meanwhile, the continued growth of food delivery, online food services, quick-service restaurants (QSRs), and airline catering creates steady demand for eco-friendly disposable tableware. Future industry development will focus on automated production, enhanced food-grade certifications, customized packaging, and the application of bamboo fiber composite materials. Overall, while the disposable bamboo tableware sector remains in the early stages of adoption as an eco-friendly alternative—offering significant market potential—it faces challenges such as fluctuations in bamboo raw material prices, labor costs, and competition from sugarcane bagasse-based products.
