The disposable coronary balloon dilatation catheter is a medical device used in percutaneous coronary intervention (PTCA) to treat coronary artery stenosis. This device is designed to guide an inflatable balloon to the site of arterial narrowing, where the balloon is inflated to dilate the constricted vessel and restore proper blood flow. This minimally invasive procedure helps improve blood supply to the heart, relieve symptoms of angina, and may even prevent severe complications like myocardial infarction. The disposable nature of the catheter ensures safety and hygiene for each use.
