A single-use cryoprobe consisting of an integral head, middle, and tail; the middle is a profile containing plastic input tubes, output tubes, and temperature-measuring leads; the head includes a needle-like probe with a hollow cavity. There is a core tube in it; there is a gap between the core tube and the probe cavity; the probe head is installed on the front end of the hollow handle and extends into the cavity; the middle part extends into the cavity from the rear end of the handle, and the input tube and output tube in the middle part are connected with the core tube. The core tube is connected to the probe cavity; the temperature measurement lead wire penetrates into the probe cavity, and its head is located at the front end of the probe cavity; the tail shell is flush with the rear end of the inner shell loaded into it and is equipped with a metal septum; behind the septum the mandrel is integrated with the shell; the mandrel, the spacer and the inner shell are provided with two channels, and the metal input tube and the metal output tube are respectively installed in it, and are respectively connected with the refrigerant input port and the refrigerant outlet; the temperature measurement lead wire is thrown out. The shell communicates with the host of the cryotherapy device. The utility model has the advantages of simple structure, low cost, no need of disinfection, and fundamentally eliminating medical hidden dangers.
