A disposable dental mirror is a small, handheld instrument used by dental professionals during oral examinations and dental procedures. It typically consists of a handle and a mirror attached at an angle to the handle. The mirror is usually made of high-quality glass or polished metal, providing a reflective surface that allows the dentist or dental hygienist to visualize and examine areas inside the mouth that are difficult to see directly.

Disposable dental mirrors are designed for single-use only, meaning they are intended to be discarded after each patient to maintain hygiene and prevent the transmission of infectious diseases. They come individually packaged and sterilized, ensuring a clean and safe instrument for each patient.

The use of disposable dental mirrors helps to reduce the risk of cross-contamination between patients, as it eliminates the need for time-consuming cleaning and sterilization procedures. It also provides convenience for dental professionals, as they can simply dispose of the mirror after use, saving time and effort.
