Abstracts

The global Disposable Endoscopic Mouthpiece market size is expected to reach \$ 34.96 million by 2032, rising at a market growth of 7.0% CAGR during the forecast period (2026-2032).

In 2025, global sales of disposable endoscopic mouthpieces reached 3.25 million units, with an average selling price of US\$6.5 per unit. Total production capacity was approximately 3.8 million units per year, and gross profit margins ranged from 30% to 36%. Disposable endoscopic mouthpieces are consumable aids used in medical endoscopic procedures. By isolating the patient's mouth from the endoscope, they ensure operational safety and reduce the risk of cross-infection, and are widely used in otolaryngology, gastroenterology, and minimally invasive surgery. Upstream raw materials mainly include medical-grade plastics, silicone, and antibacterial coating materials. Downstream consumers are primarily hospitals, clinics, and endoscopic equipment suppliers. Supply models mainly involve bulk supply and customized packaging.

Future solutions can be achieved by improving materials to enhance comfort and durability, developing multifunctional mouthpieces compatible with different types of endoscopes, and meeting the needs of home telemedicine and portable surgical operations. Meanwhile, with the increase in the volume of endoscopic examinations and the improvement of medical infection control awareness, the demand for disposable endoscopic mouthpieces will continue to grow, and the market potential is significant. Business opportunities are concentrated in the fields of high safety, high compatibility and customizable products.

The disposable endoscopic mouthpiece market is experiencing steady growth, primarily

driven by improvements in global healthcare standards, the widespread adoption of minimally invasive surgery, and increased awareness of infection control. As hospitals, clinics, and endoscopy centers place greater emphasis on operational safety and cross-infection risk control, the demand for high-quality, disposable mouthpieces continues to rise, particularly in otolaryngology, gastroenterology, and minimally invasive surgery. Simultaneously, downstream users are demanding higher standards of product comfort, compatibility, and hygiene, prompting companies to continuously innovate in material improvements, antibacterial coatings, and adaptability design.

In the future, with the increase in endoscopic examinations and the development of home-based telemedicine and portable surgical procedures, the disposable endoscopic mouthpiece market will further expand. High safety, high compatibility, and customizable products will become the main drivers of market growth, while also bringing significant opportunities for technological innovation and value-added services.
