The global Disposable Intravascular Balloon Dilation Catheter market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A disposable intravascular balloon dilation catheter is a medical device used for vascular intervention therapy, also known as a balloon catheter. It mainly consists of a balloon, catheter, syringe, and other parts. The catheter is inserted into the blood vessel to locate the balloon in the narrow area of the blood vessel that needs to be expanded. Then, the balloon is inflated through the syringe to expand the blood vessel and improve blood flow. Disposable intravascular balloon dilation catheters are commonly used in fields such as coronary intervention and peripheral vascular intervention, such as coronary stent implantation, angioplasty, and intravascular thrombolysis. It can quickly and accurately dilate blood vessels, alleviate vascular stenosis and obstruction, improve blood circulation, and improve patients' quality of life and treatment effectiveness.
