Abstracts

According to our (Global Info Research) latest study, the global Disposable Laparoscopic Linear Stapler market size was valued at US\$ 1470 million in 2025 and is forecast to a readjusted size of US\$ 2758 million by 2032 with a CAGR of 9.4% during review period.

In 2025, global sales of disposable laparoscopic linear staplers reached 6.8 million units, with an average selling price of \$210. Disposable laparoscopic linear staplers are medical devices used in laparoscopic or thoracoscopic minimally invasive surgery to achieve tissue cutting and simultaneous suturing and closure. They utilize titanium alloy staples and disposable blade assemblies to achieve precise incision and hemostasis, reducing bleeding, shortening operation time, and lowering the risk of infection. They are widely used in gastrointestinal surgery, thoracic surgery, gynecology, and bariatric/metabolic surgery. A typical device consists of a handle assembly, staple cartridge, cutting blade, and safety mechanism. The industry's total production capacity is approximately 8 million units, with a gross profit margin of 45%-60%. Upstream raw materials include medical-grade stainless steel and titanium alloy staples, polycarbonate and ABS engineering plastics, silicone seals, and precision springs. Downstream suppliers are large hospitals and minimally invasive surgery centers, which enter clinical settings through distributors and medical device integrators. Future prospects lie in intelligent electric staplers, adjustable staple height, and integration with digital surgical platforms. Demand is driven by the popularization of minimally invasive surgery and the growth in surgical volume. Business opportunities are reflected in the accelerated domestic substitution and the continuous increase in volume brought about by the expansion of medical infrastructure in emerging markets.
