The global Disposable Laparoscopic Trocars market size is expected to reach \$ 4326 million by 2032, rising at a market growth of 12.1% CAGR during the forecast period (2026-2032).

Disposable laparoscopic trocars are single-use surgical instruments designed for minimally invasive procedures. They provide a channel for inserting laparoscopic instruments into the abdominal cavity while maintaining pneumoperitoneum. These devices consist of a cannula and an obturator, with features such as sharp tips, safety shields, and sealing mechanisms to ensure precision and safety during surgery. Disposable trocars eliminate the need for sterilization, reducing cross-contamination risks and saving time in surgical workflows. In 2025, global Disposable laparoscopic trocars production reached approximately 136.58 million units and price is about 14 USD/Unit. The average gross profit margin of this product is 72%.

The market for disposable laparoscopic trocars is driven by the growing demand for minimally invasive surgical procedures. These surgeries offer benefits such as smaller incisions, faster recovery times, and reduced risk of infection, leading to increased patient preference. Disposable trocars enhance surgical efficiency by providing sterile, ready-to-use solutions, minimizing preparation time and eliminating the risk of cross-contamination. Additionally, advancements in laparoscopic techniques and the rising prevalence of conditions like obesity and gastrointestinal disorders further propel market growth.

Despite their advantages, the widespread adoption of disposable laparoscopic trocars is hindered by their high costs, especially in resource-limited settings and emerging markets. Hospitals and surgical centers often face budget constraints, making the

transition from reusable to disposable devices challenging. Furthermore, the environmental impact of single-use medical instruments has become a significant concern, with increasing scrutiny on medical waste management and sustainability practices, which could limit market expansion in regions with strict environmental regulations.
