## Abstracts

The global Disposable Laryngoscope Slice market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A disposable laryngoscope is a medical device that is used to examine the larynx (voice box) and facilitate endotracheal intubation (insertion of a tube into the windpipe). It consists of a handle, a blade, and a light source. Unlike reusable laryngoscopes, disposable laryngoscopes are designed to be used only once and then discarded, reducing the risk of cross-contamination and infection. Disposable laryngoscopes may also have additional features such as video cameras, LED lights, or fiber optics to enhance visualization and performance.
