The global Disposable Medical Overboots market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Disposable medical overboots are a type of disposable protective footwear specially designed for medical environments. They are usually made of polyethylene or other synthetic materials that are water, slip and dust resistant. These boots are used in medical institutions, operating theaters, laboratories, etc. to protect the shoes of medical personnel from the risk of contamination and cross-infection. Disposable overboots are usually sterile to ensure that medical personnel working in a sterile environment do not introduce external bacteria or contaminants. They have good wearing comfort and fit, slip over regular shoes with ease and are secured around the ankle with an elastic strap or bungee for a secure fit.
