## Abstracts

The global Disposable Needles and Syringes market size is expected to reach \$ 20661 million by 2032, rising at a market growth of 3.4% CAGR during the forecast period (2026-2032).

Disposable needles and syringes are commonly used medical devices in the medical industry for administering, injecting, or extracting bodily fluids. Their one-time use can effectively reduce the risk of cross infection and transmission of infectious diseases, ensuring the safety of patients and medical staff. A disposable needle is a tool used for puncturing the skin, injecting drugs, or extracting body fluids. It is usually made of stainless steel or plastic, with sharp needles and connecting pipes for connection to syringes or other medical devices. Disposable needles should be discarded immediately after use to avoid the spread of infection. In 2025, global Disposable Needles and Syringes production reached approximately 17,929 M Units, with an average global market price of around US\$ 884 per k unit.

Needles and syringes are typical high-frequency rigid consumables, with demand chassis determined by medical service volume, long-term chronic disease medication, immunization and public health projects. The overall scale is stable for a long time, but the price competition is strong, and the industry shows a clear trend of structural upgrading and stratification: the price center of basic products is moving downwards under the pressure of centralized procurement and cost control, and enterprises are competing for automation production capacity, yield, raw material and sterilization cost control, and global delivery capabilities; At the same time, the requirements for infection control and medical needle puncture management have been raised, promoting the penetration of safe needles, safety syringes, and self destruct syringes, bringing higher added value and stricter compliance and reliability thresholds; In addition, the trend of integrating pre filled syringes with medical devices is expanding, shifting some demand from traditional universal syringes to higher standard systematic products. The focus of

competition is also shifting from simple manufacturing to quality consistency, regulatory registration capabilities, customer certification cycles, and supply chain stability. The main opportunities in the future market are focused on safety, pre filling, and standardized suite solutions for large-scale public health and chronic disease management scenarios.
