According to our (Global Info Research) latest study, the global Disposable Non-Invasive EEG Sensor market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The disposable non-invasive EEG sensor is composed of EEG-specific conductive fluid, thin sponge, electrode wires and equipment plug-ins, which can directly collect EEG signals from the cerebral cortex without piercing the patient's skin tissue. The collected EEG signals are high in quality and fast in response, which can eliminate the influence of structures such as the scalp, skull, and dura mater on EEG activities to the greatest extent, reflect the excitation or inhibition state of the cerebral cortex, and accurately provide EEG consciousness state detection and evaluation. Depth of anesthesia.
