Abstracts

The global Disposable Non-Invasive EEG Sensor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The disposable non-invasive EEG sensor is composed of EEG-specific conductive fluid, thin sponge, electrode wires and equipment plug-ins, which can directly collect EEG signals from the cerebral cortex without piercing the patient's skin tissue. The collected EEG signals are high in quality and fast in response, which can eliminate the influence of structures such as the scalp, skull, and dura mater on EEG activities to the greatest extent, reflect the excitation or inhibition state of the cerebral cortex, and accurately provide EEG consciousness state detection and evaluation. Depth of anesthesia.
