The global Disposable Ophthalmic Knives market size is expected to reach \$ 1075 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032).

Disposable ophthalmic knives are sterile, ready-to-use precision cutting instruments designed specifically for minimally invasive eye surgeries. They are typically made of ultra-thin blades made of medical-grade stainless steel and integrated with ergonomic plastic or metal handles. In 2025, global Disposable Ophthalmic Knives production reached approximately 124 million units, with an average global market price of around 5.5 US\$/Unit. The production capacity of Disposable Ophthalmic Knives reaches 155 million units, and the industry's gross profit margin is approximately between 40% and 60%.

The market demand for disposable ophthalmic knives continues to grow, primarily driven by multiple factors, including the increasing number of cataract and refractive error patients worldwide, the rising popularity of minimally invasive ophthalmic surgery, the advantages of disposable high-precision instruments in infection control and surgical efficiency, and the upgrading of products towards sharper, more stable, and safer products driven by advanced materials and precision manufacturing technologies. Simultaneously, the improvement of medical infrastructure in emerging markets and the commercialization of high-end ophthalmic treatment services have further expanded the clinical demand for high-quality ophthalmic scalpels.
