Analgesic pump is a liquid infusion device that can maintain a stable concentration of drugs in the blood, which can help achieve better analgesic treatment with less drugs. Patients are usually allowed to press themselves to add an additional infusion dose to the continuous infusion volume, so the treatment is more individualized and consistent with the characteristics of large individual differences in pain perception. It can be used for postoperative analgesia, cancer pain, labor analgesia, etc.

The global medical device market is estimated to be US\$603.3 billion in 2023, and is expected to grow at a CAGR of 5% over the next six years. At present, global health care expenditure accounts for about 10% of global GDP, and the proportion will continue to increase in the next few years. It is mainly due to the increasing demand for healthcare from an aging population, rising prevalence of chronic and infectious diseases, and expansion in emerging markets. The medical devices market plays an important role in the healthcare spending industry. The medical devices market is driven by several factors, mainly including increasing global demand for advanced medical services, advancements in medical technology, growing geriatric population, rising healthcare spending, and increasing awareness for early disease diagnosis and treatment, among others.
