Abstracts

The global Disposable Pen Needles market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Disposable pen needles are medical devices used in conjunction with insulin pens for subcutaneous injection of insulin. These needles are designed for single-use and are an essential component of insulin delivery systems for individuals with diabetes who require regular insulin injections. Disposable pen needles are available in various sizes, lengths, and gauges to accommodate the diverse needs and preferences of patients.

Disposable pen needles are designed to be compatible with various insulin pens available on the market. They can be easily attached to the pen for insulin administration. Pen needles are individually packaged and sterilized to maintain their sterility until they are used. Sterility is crucial to prevent infection and ensure safe injections. These needles come in different gauges (thickness) and lengths. Common gauges range from 28 to 32, with lower gauge numbers indicating thicker needles. Lengths typically vary from 4mm to 8mm. Thinner needles (higher gauge) are generally less painful for injections. The bevel of the needle refers to the slanted tip. It affects the ease of penetration and painlessness of the injection. Pen needles have bevel designs optimized for comfort during injections.
