The global Disposable Peripheral Capillary Oxygen Saturation Sensor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A pulse oximeter is a medical device that indirectly measures the oxygen saturation of a patient's blood and changes in blood volume in the skin, producing a photo plethysmograph. It is attached to a medical monitor so staff can see a patient's oxygenation at equal periods. Now, there is a portable battery-operated pulse oximeters are also available for home blood-oxygen monitoring. The SpO2 sensor works out the oxygen saturation by comparing based on red light and infra-red light is absorbed by the blood. Depending on the amounts of oxy HbO2 and deoxy Hb present, the ratio of the amount of red light absorbed compared to the amount of infrared light absorbed changes
