Abstracts

Disposable respirators are one of the most widely used respiratory protection devices due to the ease of use and disposal as well as their reasonable prices. Unlike face masks, disposable respirators provide low breathing resistance and efficient protection against oil-based and non-oil-based particulates.

Scope of the Report:

This report focuses on the Disposable Respirator in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Any disease can turn into an epidemic in the absence of proper preventive measures, improper sanitation, and lack of precaution. During major outbreaks of epidemic diseases, disposable respirators play a pivotal role in preventing and controlling the spread of airborne diseases. In addition, disposable respirators also assist in eliminating harmful viruses, bacteria, and mold from the human body. Moreover, governments also recommend the use of disposable respirators to prevent and avoid the spread of viruses such as influenza, meningitis, and measles into the air, thereby infecting human beings. This will, in turn, propel the growth of the market over the next few years.

The disposable respirators market is losing its competitiveness with the influx of advanced respiratory protection equipment such as SCBAs, PAPRs, and airline respirators. These equipment help in filtering harmful substances such as aerosols and in turn, improves the air quality. However, well-established manufacturers in the market are competing on factors such as efficiency of filtration, comfort, and usability. To retain their respective position in the market, manufacturers are focusing on introducing ergonomic designs for better comfort of the end-users.

The Americas accounted for the highest share of the disposable respirator market. Stringent regulations on the safety of the workers has facilitated the need for adopting protection equipment such as disposable respirators in the region. In the Americas, the US projected a major share in the market, owing to the rising demand for disposable respirators among the manufacturing industries. Several manufacturing industries such as steel plants, aerospace, oil and gas, food processing, and chemical plants are exposed to harmful smoke, which will accelerate the growth of the disposable respirators in the region.

The worldwide market for Disposable Respirator is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
