Abstracts

The global Disposable Sealed Needleless Infusion Connector market size is expected to reach \$ 1639.8 million by 2030, rising at a market growth of 4.2% CAGR during the forecast period (2024-2030).

The global medical device market is estimated to be US\$603.3 billion in 2023, with a compound annual growth rate of 5% expected in the next six years. Global health care expenditure currently accounts for approximately 10% of global GDP, and the proportion will continue to increase in the next few years. This is primarily due to the increasing demand for healthcare from an aging population, the rising prevalence of chronic and infectious diseases, and the expansion of emerging markets. The medical device market plays an important role in the healthcare spending industry. The medical device market is driven by a variety of factors, including increasing global demand for advanced medical services, advancements in medical technology, growing geriatric population, increasing medical expenditures, and increasing awareness of early stage disease diagnosis and treatment.

Needleless infusion connectors are one of the important components of needleless infusion systems. These connectors eliminate the need for steel needles to pierce rubber stoppers and connect infusion sets or syringes to indwelling cannulas, including CVC, PICC and peripheral intravenous catheters; The needle-based injection is changed to a needle-free injection system, and the sealing function of the infusion channel can still be maintained after the infusion set or syringe is disconnected. Needleless infusion connectors can avoid the use of needles for repeated punctures and reduce stabbing injuries to medical staff.
