The global Disposable Self-destructing Vaccine Syringe market size is expected to reach \$ 565.2 million by 2029, rising at a market growth of 4.8% CAGR during the forecast period (2023-2029).

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.

A self-destructing syringe is a disposable syringe product that prevents reuse after use. After the injection is completed, it relies on manual or mechanical force to prevent the push rod from being withdrawn from the syringe, causing self-locking, or the sealing performance of the piston is destroyed. Or the plunger of a syringe could be inferred, ultimately preventing reuse.
