The Disposable Suction Irrigation System is a single-use medical device that integrates flushing and suction functions. It achieves simultaneous cleaning of surgical wounds or body cavities and removal of tissue fluid/blood through independent fluid channel design. Its core structure consists of flushing lines, suction lines, hand-held handles, and drive devices. It uses sterile packaging and anti-backflow design to avoid cross-infection risks. The system improves cleaning efficiency through high-pressure pulse flushing technology and uses negative pressure suction function to quickly remove waste fluid. It is suitable for surgical scenarios that require efficient wound management.
