Sterilization plays an important role in the healthcare industry. The probability of getting affected by an infection or a virus is high in medical settings like clinics, hospitals, and laboratories. Using disposable medical devices helps overcome the challenges of sterilizing a device used for a procedure.

According to our (Global Info Research) latest study, the global Disposable Surgical Equipment market size was valued at US\$ 5608 million in 2023 and is forecast to a readjusted size of USD 9687 million by 2030 with a CAGR of 8.0% during review period.

The increasing number of surgical procedures is also one of the key factors expected to drive the overall market. In January 2023, the International Society of Aesthetic Plastic Surgery (ISAPS) released its annual report, projecting a 19.3% increase in 2021 plastic surgery procedures, with over 12.8 million surgical and 17.5 million non-surgical procedures performed globally. These facts highlight that there will be a steady demand for plastic surgeries in the coming years. As a result, the usage of disposable surgical devices is anticipated to grow over the forecast period.
