Abstracts

According to our (Global Info Research) latest study, the global Disposable Syringe market size was valued at US\$ 11200 million in 2024 and is forecast to a readjusted size of USD 13370 million by 2031 with a CAGR of 2.6% during review period.

Disposable syringe is a disposable medical appliance. A syringe is a simple piston pump consisting of a plunger that fits tightly in a tube. The plunger can be pulled and pushed along inside a cylindrical tube (the barrel), allowing the syringe to take in and expel a liquid or gas through an orifice at the open end of the tube. The open end of the syringe may be fitted with a hypodermic needle, a nozzle, or tubing to help direct the flow into and out of the barrel.

The Disposable Syringe market is primarily driven by the increasing global awareness of healthcare safety and infection control. Disposable syringes help reduce the risk of cross-contamination and the spread of infectious diseases, especially in clinical settings. Governments and health organizations are actively promoting single-use medical devices to ensure safe practices, particularly in response to healthcare-associated infections (HAIs) and the risks of needle-sharing. Additionally, the rising prevalence of chronic diseases and the growing need for vaccinations globally are boosting demand for disposable syringes in hospitals, clinics, and home care settings, further fueling market growth.

A major challenge for the Disposable Syringe market is the environmental impact associated with single-use plastic waste. As disposable syringes are typically made from plastic and cannot be easily recycled due to potential contamination, their widespread use contributes to a growing volume of medical waste. Proper disposal is

essential to prevent biohazard risks, but the costs and logistics of safe waste management create hurdles, particularly in regions lacking advanced waste disposal infrastructure. Additionally, regulatory scrutiny over plastic use and waste management is increasing, compelling manufacturers to explore sustainable alternatives, which could increase production costs.

Global core disposable syringe manufacturers include BD, Terumo and WEGO etc. The top 1 company hold a share about 40%. Europe is the largest market, with a share about 33%, followed by Asia Pacific and North America with the share about 25% and 21%. In terms of product, safety syringes is the largest segment, with a share over 80%. And in terms of application, the largest application is medical uses, followed by non-medical uses.
