According to our (Global Info Research) latest study, the global Disposable Thermal Fuse market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

A disposable thermal fuse is a temperature-sensitive circuit protection component designed to automatically cut off the circuit when electrical equipment overheats, thereby preventing equipment damage and safety accidents such as fire. It consists of a thermal material encapsulated in a metal or plastic shell and a pair of electrodes. When the ambient temperature exceeds a predetermined value, the thermal material melts rapidly, causing the circuit to be disconnected. Once triggered, the disposable thermal fuse cannot be reset or restored and needs to be replaced.
