Abstracts

The global Disposable Urinary Catheter market size is expected to reach \$ 4908 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

Disposable urinary catheters are sterile single-use or short-term catheter products designed for urine drainage, bladder management, intraoperative urine-output monitoring and urological procedures. They are commonly made from medical-grade latex, PVC, silicone, TPU or other biocompatible materials, and can be classified into disposable intermittent catheters, disposable indwelling Foley catheters, hydrophilic-coated catheters and antimicrobial or anti-infection catheters. In 2025, Global disposable urinary catheters sales are estimated at about 6,300 million units, with an average ex-works price of around 0.52 US\$/Unit. The value chain includes upstream medical PVC, silicone, latex, TPU, hydrophilic coatings, lubricants, sterile packaging and catheter connectors; midstream catheter and catheter-kit manufacturers; and downstream users including hospitals, urology departments, ICUs, operating rooms, long-term care facilities, rehabilitation centers and home-care channels.

The disposable urinary catheter market is mainly driven by population aging, rising surgical volumes, increasing prevalence of urological diseases and neurogenic bladder, and growing demand for long-term care and home-based care. Elderly patients, post-operative patients, people with spinal cord injury, prostate-related conditions and disabled care populations require continuous bladder management and urine drainage, supporting stable consumption in both hospital and out-of-hospital settings. At the same time, stronger infection-control requirements and greater attention to catheter-associated urinary tract infection (CAUTI) prevention are accelerating the shift toward single-use, hydrophilic-coated, pre-lubricated and antimicrobial catheter products. As

patient acceptance of self-catheterization improves, reimbursement coverage expands and medical-consumable penetration rises in emerging markets, disposable urinary catheters are expected to maintain steady growth, although centralized procurement, cost-control policies and product homogenization may pressure manufacturers' margins.

This report studies the global Disposable Urinary Catheter production, demand, key manufacturers, and key regions.
