## Abstracts

Dissolvable microneedle painless transdermal drug delivery technology, as a new transdermal drug delivery method, has the advantages of subcutaneous injection and traditional transdermal drug delivery. The drug molecules are solidified on the patch matrix to create micron-level microneedles. The array serves as a drug delivery channel, enabling efficient transdermal absorption of drugs through the stratum corneum, breaking through the limitations of traditional transdermal patches that can only conduct small molecule drugs, and is an international research and development hotspot in the field of new transdermal drug delivery technology.

According to our (Global Info Research) latest study, the global Dissolvable Microneedle Transdermal Drug Delivery Technology market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
