According to our (Global Info Research) latest study, the global Distance Measurement Radar market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Distance measurement radar is a type of radar, that is, pulse radar. A radar that measures the distance from the radar to the target without providing target angle information. Pulsed radar ranging uses pulsed microwave technology. Its antenna system emits a pulse beam with a frequency of 6.3GHz and a duration of 0.8ns, and then pauses for 278ns. During the pause of pulse transmission, the antenna system will act as a receiver to receive reflected waves, and at the same time Perform echo image data processing, and give indication and electrical signals.
