A spacer ring, also known as a positioning ring or a fixed amount ring, is a mechanical component usually used to determine or limit the relative position or distance between two adjacent components. It plays the role of positioning, connecting and fixing in mechanical assembly, effectively ensuring the relative position and spacing between equipment components. The distance ring can be fixed at a specific position of the equipment through threaded connection, pin connection or other means to ensure the accuracy and stability of the assembly. Spacer rings are usually made of metal or plastic materials and are wear-resistant, corrosion-resistant and high-strength.
