## Abstracts

According to our (Global Info Research) latest study, the global Distributed Coolant Distribution Units (CDU) market size was valued at US\$ 569 million in 2025 and is forecast to a readjusted size of US\$ 2065 million by 2032 with a CAGR of 20.1% during review period.

Distributed coolant distribution units, arranged inside the cabinet and installed separately for each cabinet, are an effective solution for cooling high-density equipment. Each coolant distribution unit is responsible for the cooling of all cooling components within its cabinet, ensuring that heat is managed evenly. This design allows the cooling system of each cabinet to be optimised for specific needs, improving cooling efficiency.

Distributed coolant distribution units allow for real-time monitoring and adjustment, further enhancing system reliability and flexibility. This layout is particularly suitable for data centres and high-performance computing environments, effectively reducing the risk of equipment overheating and improving overall system stability and performance.

Upstream: The main components of a CDU include pumps, reservoirs, power supplies, control boards, and heat exchangers. Additionally, filters, flow meters, pressure transducers, and other devices are used in managing the operation of the CDU in conjunction with the Server Rack. Downstream: CDUs are primarily used in data centers.

In 2025, global sales of Distributed Coolant Distribution Units reached approximately 17 K units, with an average global market price of around US\$ 33 K/unit. Production capacity varies significantly among manufacturers, with gross profit margins ranging

from approximately 30% to 50%.

#### Fast Market Growth:

In the current landscape dominated by AI-driven applications and dense chip architectures, liquid cooling has emerged as a pivotal technology. CDU, as a key part in liquid cooling system, will benefit from the prevalence of AI and high performance computing (HPC). The CDU market is expected to experience fast growth in the coming years.

#### Intensified Competition:

As showing great market potential, many investors and companies have laid their attentions on the CDU market. With more and more companies will enter in the CDU industry, the whole market competition will be intensified in the coming years.

#### Continued Technology Innovation:

CDU include liquid-to-liquid and liquid-to-air types. Though limited in cooling capability compared with liquid-to-liquid CDUs, liquid-to-air CDUs don't require water pipes, can be installed more easily, and take less space and lower initial cost than liquid-to-liquid CDUs. While although liquid-to-liquid CDUs hold the best cooling performance of all types. They require, among others, pipes to be installed to operate with a facility's water. More research and technology innovation will be put on liquid-to-liquid CDUs by CDU manufacturers to provide high performance CDU to data centers.
