According to our (Global Info Research) latest study, the global Distributed Edge AI market size was valued at US\$ 9732 million in 2025 and is forecast to a readjusted size of US\$ 31280 million by 2032 with a CAGR of 18.4% during review period.

Distributed Edge AI refers to the integration of artificial intelligence (AI) with edge computing, where data processing and decision-making are performed on local devices or nodes near the source of data generation, rather than sending all data to a centralized cloud. This approach improves response times, reduces latency, and enhances privacy and security by keeping sensitive data on the edge. Distributed Edge AI enables real-time processing for applications in IoT, autonomous vehicles, smart cities, and industrial automation.
