## **Abstracts**

According to our (Global Info Research) latest study, the global Distributed Numerical Control (DNC) Management System market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

DNC, distributed numerical control, is a commonly used manufacturing term for networked numerical control machine tools. It is a numerical control system that connects computers and numerical control machine tools using network technology and distributes them in different workshops. From the perspective of industrial software, DNC is a bridge to realize the integration of CAD (Computer Aided Design), CAM (Computer Aided Manufacturing) and other computer production management systems; from the perspective of CNC machine tools, DNC connects several CNC machine tools in one. On the computer, the management and transmission of digital control programs are realized.

The functions of DNC mainly include NC program management, data sharing, communication, NC program and data distribution and transmission, machine tool status monitoring, tool distribution, etc. The function of DNC is mainly to establish a distributed control network, realize the network management of machine tools, realize the distribution and transmission of NC programs, and realize the distribution of tools. Compile the NC program on the computer and use the network for transmission to improve the accuracy of program and data transmission, and the processing technology, process, tools, etc. can be checked at any time, so DNC can improve production efficiency. Its essence is a numerical control system distributed in the

workshop composed of computers and machine tool groups with numerical control devices using computer network technology.
